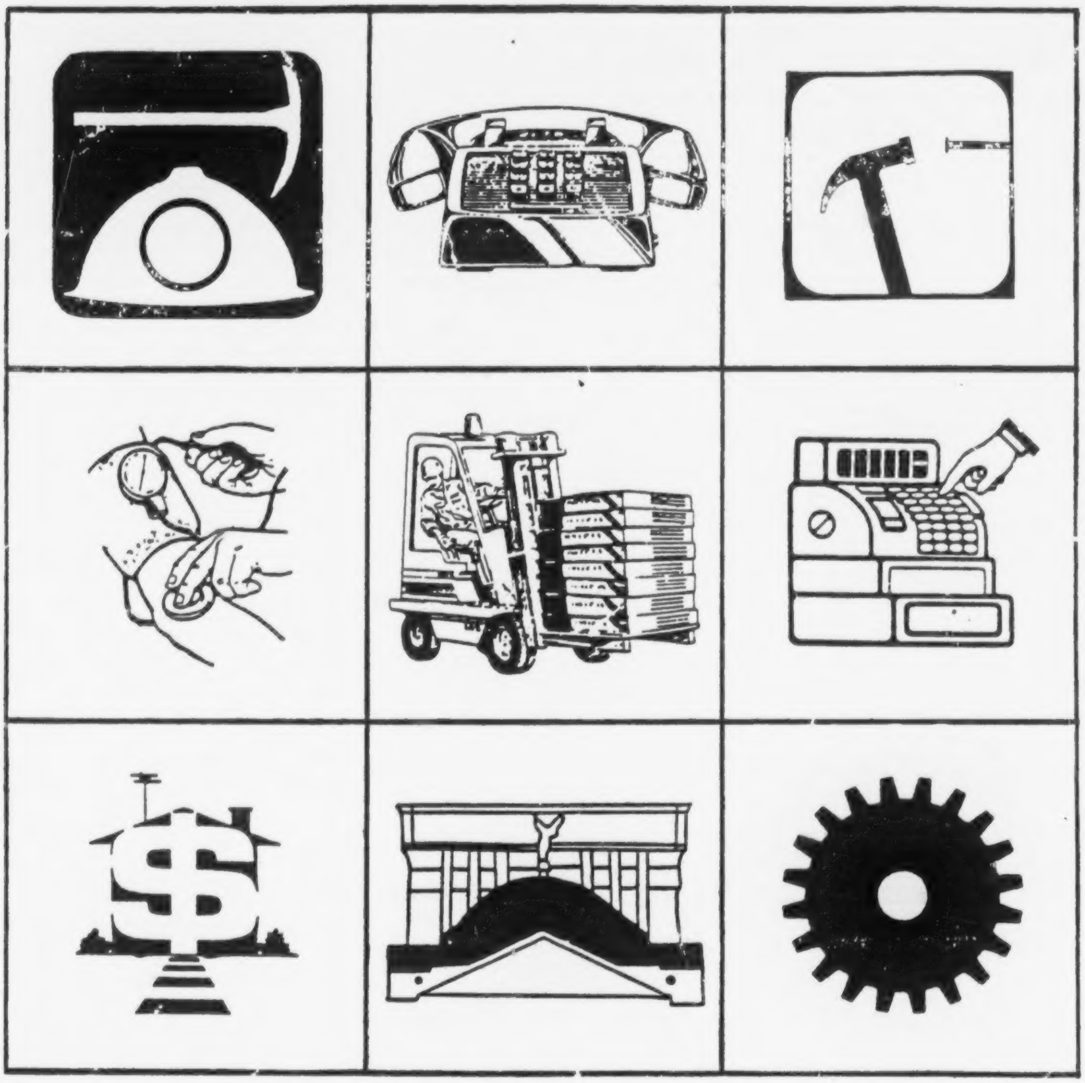
91-92



Arizona Department of Economic Security
Research Administration

THE COVER

Arizona's Nonagricultural Industries:

Mining; Transportation, Communications, Public Utilities; Construction
Services; Wholesale Trade; Retail Trade
Finance, Insurance, Real Estate; Government; Manufacturing

Dear Planner,

The accompanying Annual Planning Information 1991-1992 is based on 1980 census information. Exceptions to this basis of information are (1) the Family Assistance tables in the SDA sections and (2) Poverty Income Guidelines in the Appendix. Approval of 1990 census figures for this publication are not expected prior to July 1991. As soon as the new census data is available, Research Administration will begin work on Annual Planning Information 1992-1993. County (SDA) total population figures from the 1990 census are expected to be available in July; demographic breakouts may still be unavailable or incomplete. The Appendix information will also be updated at this time.

Research Administration anticipates a return to its September publication schedule this year. Several factors have contributed to recent delays in the publication of the Annual Planning Information. However, some of these factors have resulted in benefits to both publication productivity and the quality of the population statistics presented in the Annual Planning Information.

This edition of the Annual Planning Information, on a county average basis, overestimates 1990 census figures for total population by only 2.54%. Unless radical shifts in age groups or ethnic groups have occurred in your SDA, there should be little difference between these estimates and those that will result from the new census.

STATE OF ARIZONA

POPULATION

Arizona population on July 1, 1991, and July 1, 1992, according to official projections, will be 3,798,000 and 3,899,100, respectively. Counts from the 1990 census were still unavailable as this *Annual Planning Information* report was being prepared, so later projections benchmarked to the census may bring revisions.

Official Arizona projections for population growth between 1990 and 1991 imply a growth rate of 2.3 percent, a slower rate than the projected 1980s decade average of 3.3 percent. Growth between 1991 and 1992 is projected to be similarly slow at 2.2 percent. Nevertheless, these growth rates are still more than triple the projected national average.

The U.S Department of Commerce projects Arizona to be the second fastest growing state in the decade of the 1990s with annual average growth rates of 1.7 percent. The national annual average growth rate of the same period is projected to be only 0.7 percent.

INCOME

Arizona total personal income was growing faster than national total personal income in 1987 and 1988, but slowed to equal the national rate of 7.6 percent in 1989 according to the U.S. Department of Commerce.

Arizona had per capita personal income of $15,802 in 1989 which was 90 percent of the $17,596 U.S. level. The growth rate for per capita personal income at 5.4 percent in 1989 was slower than the U.S. rate of 6.6 percent, implying that Arizona lost ground in its advance toward the national average. Commerce projections for per capita personal income growth show Arizona just barely keeping pace with the national average rate of growth to the year 2000. Granting those projections are valid, the gap between Arizona and U.S. per capita incomes will not be closed in the decade of the 1990s.

TOTAL EMPLOYMENT
(By Residence of Worker)

Arizona Total employment grew only 0.8 percent between *December 1989 and December 1990 (prebenchmarked 1989 and 1990 estimates) achieving a level of 1,642,000. Arizona's employment to population ratio in December 1990 was 58.4 percent compared to the U.S. ratio of 62.3 percent. The lower ratio in Arizona may be part of the reason for lower per capita incomes in Arizona. Arizona's labor force participation rate at 61.9 percent was also lower than the national rate (66.3 percent).

DES Research Administration forecasts of total employment for JTPA Program Year (PY) 90-91 and PY 91-92 are 1,620,462 and 1,668,146, respectively. The forecast for total employment growth between PY 90-91 and PY 91-92 is 2.9 percent. Rate of growth and consequent total employment levels may be revised downward by subsequent forecasts.

JOBS
(By Worker's Place of Work)

The number of jobs increased in Arizona by four times the national rate in 1990 (December to December - prebenchmarked). Arizona's growth rate was 2.8 percent versus the U.S. rate of 0.7 percent. The total number of nonfarm payroll Arizona jobs in December 1990 was 1,549,500.

Despite outperforming the nation in creating jobs during 1990, the 42,400 jobs created were fewer than the average (62,600) created December to December during the economic expansionary period since 1982. Growth in 1990 was well below the peak growth year of 1984 when 99,600 jobs were created and Arizona was enjoying a construction and real estate boom. But it was nearly double the number created in 1988 (24,300) two years after Arizona's construction bust began.

JOB CREATION, THE ECONOMY AND WAR

The outlook for job creation two years into the future is more uncertain than usual as this is being written. U.S. involvement in a war with Iraq is only days old. There is a consensus among economists that a national recession began during the fourth quarter of 1990. There is also agreement among many, although not all, economists that the recession will probably last only two quarters.

The depth and duration of the recession will probably turn on events associated with the war. If the Iraq war is short and nondestructive to oil production capabilities of the area, the recession will probably be short. If the war is long and destructive to oil supplies raising oil's price for a substantial period, the national recession will probably be at least one year in length.

Arizona can survive a short national recession and still create some jobs in 1991. It probably won't if the national recession lasts a full year. Nevertheless, Arizona's economy will probably rebound faster than the nations, because construction employment is already pared by a third, manufacturing inventories are lean, and population is growing.

UNEMPLOYMENT

The Arizona unemployment rate climbed to 5.9 percent by December 1990, just 0.2 percentage points below the rising national rate. The DES Research Administration in August 1990 forecasted the state unemployment rate to be 5.2 percent in PY 90-91 and 5.3 percent in PY 91-92. Later forecasts (February 1991) will probably bring an upward revision to these rates.

Each percentage point of Arizona's unemployment rate represents approximately 17,000 unemployed. The forecasted rate for PY 90-91 of 5.2 percent implies 88,161 unemployed.

POVERTY

Until 1990 census data are available, Arizona's poverty rate remains reported at 12.7 percent, and estimates of the number of individuals in poverty are made by multiplying that rate by the forecast of the total population. Consequently the number of individuals in poverty in Arizona is projected to be 482,346 in 1991.

Poverty rates determined from the 1980 census varied across the JTPA SDAs from a low of 8.8 percent in Greenlee County to a high of 47.8 percent on the Navajo Nation. While the condition of poverty is permeated throughout the reservations as indicated by their high poverty rates, there are more people in poverty in the urban areas of Maricopa and Pima Counties. The largest number (109,011 in 1990) among the SDAs is in the Balance of Maricopa County.

JTPA'S IMPACT ON UNEMPLOYMENT AND POVERTY

When 1990 census data becomes available in detail, it may be possible to give some assessment whether JTPA and other programs of the 1980s had any significant impact on the incidence of poverty. At least we will know if the incidence of poverty has declined or grown over the decade.

An assessment is always complicated, however, by where the economy was in relation to the business cycle when the census was taken. In 1990 the U.S. was in the eighth year of a business expansion. In 1980, the nation was in a moderate recession. From the difference in those circumstances alone, there should be some improvement in poverty rates from 1980 to 1990.

Impacts on unemployment are even harder to assess. There will always be "natural" unemployment just from the normal circumstance of people changing jobs in search of something better. Programs like JTPA are directed primarily toward structural unemployment. Structural unemployment occurs when the skills of the labor force are different from those in demand by employers, or from geographic pockets of insufficient economic activity. This may be caused by competitive factors on a world scale, by the advancement of technology at a faster pace than the labor force of a given area is keeping up, or by pockets of low economic activity resulting from areas being geographically remote from major centers of economic activity. Many areas of Arizona's rural counties fall into the latter category.

A third kind of unemployment, cyclical unemployment, occurs when the economy moves from an expansionary period into a recession. The nation was experiencing that kind of unemployment in the final quarter of 1990, and will probably experience more in the first half of 1991. In Arizona, the construction industry has been experiencing cyclical unemployment since 1986. Cyclical unemployment of a total economy (not just one industry) is more effectively combatted by assistance from government in improving the economy and creating jobs.

JTPA AND PERFORMANCE STANDARDS

Better indicators of JTPA's success are the U.S. Department of Labor's JTPA performance standards. The Labor Department offers a mechanism to adjust these standards to account for differences in local client mix from the national average of all SDAs in the previous program year, and the differences in economic circumstances.

The latest complete data available on Arizona performance were for PY 88-89. These show success by most SDAs in being able to place, or improve the earnings of, client adults to a degree greater than that of the lowest quartile of all the nation's SDAs. The urban center and Indian reservation SDAs had the most difficulty in out-performing national low quartile performance on adult placement measures. They had more relative success with wage improvement efforts.

In advance of the nation's effort toward welfare reform, Arizona JTPA has been encouraging special efforts toward welfare clients. Response from SDAs has been mixed. Welfare follow-up employment retention rates have exceeded the national low quartile rate by slightly more than half (9) of Arizona's 16 SDAs. Exactly half exceeded the Arizona average retention rate for welfare clients.

JTPA services to youth have enhanced employability by an amount greater than the national low quartile in 11 of Arizona's SDAs. Ten Arizona SDAs had greater than national low quartile youth placement rates.

APACHE COUNTY SERVICE DELIVERY AREA

Economic activity in Apache County contracted slightly in 1990. On a countywide basis, total nonfarm wage and salary employment shrank by almost 1.0 percent, paring 125 jobs. The total civilian labor force declined as well, dropping 200, which helped drive up the unemployment rate.

Over the next two years, Apache County's economy is expected to remain fairly stable with little or no growth. The nonreservation portion of Apache County will experience an increase in unemployment rates to double-digit levels. In both JTPA PY 1990 and 1991 the unemployment rate is forecast to average 10.3 percent. These unemployment rates represent between 400 and 450 unemployed.

Government employs the largest number of people in Apache County accounting for almost one-third of wage and salary positions. Although government added employment in 1990, the numbers were considerably less than past years. Employment in government is expected to remain stable in the coming JTPA program years. However, turnover will still provide a number of job opportunities.

Services and trade, which account for over 40.0 percent of wage and salary employment in Apache County, will be the largest contributor of job opportunities in the coming program years. Many job opportunities will be in tourism related occupations such as cashiers, retail salespeople, maids, housekeepers, stock clerks, waiters and waitresses, food preparation workers and cooks. Job opportunities outside tourism will be abundant for secretaries, clerical and administrative support workers, bookkeepers, and accounting and auditing clerks. The majority of these openings will be the direct result of job turnover.

Mirroring both the state and the nation, employment in construction and manufacturing decreased in Apache County during 1990. Employment opportunities in these industries will be few as those currently holding jobs will be reluctant to change positions in a tight labor market.

Overall, the outlook for Apache County's economy over the next two years is for employment stability with a slight chance of very slow employment growth. The bulk of job opportunities will be a result of turnover and will be in retail trade, restaurants, and hotels and motels. Tourist from Arizona's urban centers will continue to flock to the White Mountains for cold-weather sports activities in winter and to get out of the heat during the long-hot summers. The small towns of the nonreservation portion of Apache County will be the primary beneficiaries of the constant flow of tourists into the region.

COCHISE COUNTY SERVICE DELIVERY AREA

Cochise County, better known as "Tombstone Territory" to the nation's television watchers of the 1950's, is Arizona's southeastern-most county. It borders Mexico and New Mexico, and retains an ambiance of the old west that is vanishing in much of modern Arizona. Despite its colorful history of Chiracahua Apache presence, and its namesake, the most famous of the old-west Apaches, Cochise County has no Indian reservations. Therefore, the boundaries of Cochise County and its JTPA Service Delivery Area are one and the same.

Although Cochise County tourists can taste the flavor of the old west in places like the Crystal Palace in Tombstone, or in any saloon in Bisbee's Brewery Gulch, Cochise County is well-involved in modern economic events. Fort Huachuca, established more than 100 years ago to protect settlers from Indian raids, is today a dominant feature of the local economy. Better than 40.0 percent of Cochise County workers are employed by government, and a large portion of those are employed by the Army at Fort Huachuca. Today, Fort Huachuca is a high-tech facility involved with electronic communication and equipment testing.

Just outside Fort Huachuca's gate is the City of Sierra Vista, which has been one of the fastest growing communities in the state. Sierra Vista serves as the trade and services center for the Army post, and increasingly, for much of Cochise County. While government plays a large role in the county's economy, trade; services; transportation, communication, and public utilities (TCPU); and manufacturing are also important industries.

Cochise County added 625 nonfarm wage and salary jobs in 1990, growing at a rate of 2.4 percent. This rate represents a considerable slowdown relative to past years and is about 1.0 percent lower than growth experienced by the state as a whole. The trade and service industries were responsible for over half of the new jobs added. However, both TCPU and government added proportionate amounts. Worthy of note is that government not only includes civilian employment at Fort Huachuca, but school employment at Cochise County Community College and at primary and secondary schools, as well as the correctional facility near Douglas.

The next two years holds much uncertainty for Cochise County. The effects of Operation Desert Storm on Fort Huachuca and Sierra Vista have yet to be quantified. However, one thing is certain. In the event of a protracted war, there will be less demand for goods and services, and consequently, employment opportunities in the trade and service industries will diminish. War aside, the unemployment rate for both JTPA program year 1990 and 1991 is forecast to average 6.4 percent, representing about 2,400 people in the ranks of the unemployed. Overall, the outlook for Cochise County is positive, yet future events in the Persian Gulf may portend tougher times ahead.

COCONINO COUNTY SERVICE DELIVERY AREA

Coconino County's economy enjoyed remarkable growth during calend year 1990. Nonfarm wage and salary jobs increased 5.7 percent, addi 2,325 new jobs. With the exception of finance, insurance, and re estate, which lost 50 jobs, all industries contributed to 1990's gain

With the nation and the state experiencing trouble in the manufacturing sector, Coconino County surprisingly added manufacturing jobs at a brisk pace in 1990. Manufacturing added 400 jobs, growing at a rate of 13.3 percent. Construction, too, showed positive gains, adding 125 jobs and registering a growth rate of 7.2 percent. Road improvement and maintenance accounted for much of the construction employment, but construction of new retail stores and hotels and motels also contributed to the gain.

Growth in trade slowed in 1990, adding only 325 new jobs. The Flagstaff area continues to be the primary beneficiary of this job growth which further solidifies its position as northern Arizona's foremost trade center. Services' employment growth also slowed in 1990 with 475 jobs being added for a growth rate of 4.3 percent. Much of the new employment came from new and expanded hotels and motels.

Government also had an exceptional year in 1990, growing 8.3 percent (950 new jobs). State and local, school, and federal government all contributed to the gain.

Coconino County's economy is sufficiently well diversified to offer many occupational opportunities. Consult Coconino County's "Growing Industries and Occupations" list or Occupational Employment Forecasts for a complete accounting. Important economic centers include Flagstaff, Williams, Page, and Grand Canyon Village. Williams achieved a major economic landmark in 1989 with the opening of the Williams to Grand Canyon Railroad. The continuing success of the railroad will offer opportunity for more tourist type development in the Williams area.

The nonreservation Coconino County unemployment rate is forecast to average 6.3 percent in both JTPA PY 1990 and 1991. These are among the lowest nonmetropolitan county unemployment rates in Arizona, higher only than Yavapai and Mohave counties' rates. These rates reflect approximately 2500 people in the ranks of the unemployed.

The outlook for the nonreservation portion of Coconino County remains positive. Continuing economic growth and diversification can be expected over the next two years. However, a wild card, Operation Desert Storm, has been thrown in. A protracted war in the Persian Gulf may alter tourists plans to visit Coconino County, resulting in lower activity in the trade and services industries.

GILA COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA

Gila County enjoyed job growth at a higher rate than the state in 1990 growing 6.3 percent (675 jobs). DES, Research Administration, forecasts Gila County unemployment rates to average 7.8 percent in JTPA PY 1990 and 7.9 percent in PY 1991. These rates represent about 900 people unemployed.

Formerly, the Gila County Service Delivery Area had been dependent upon the mining industry for its economic health. While mining still accounts for an important part of the area's nonfarm wage and salary employment (12%), it is no longer the sole determinant of area's economic well-being. In recent years, the mining industry has shown signs of improvement -- the result of favorable copper prices on world markets. However, mining employment in Gila County actually decreased slightly in 1990, eliminating 25 jobs. Copper prices are expected to soften somewhat in the coming years and therefore we can expect little, if any, growth in this sector. Manufacturing sectors that are closely allied with the mining industry -- such as primary metals; and stone, clay and glass -- showed improvement in 1990, adding 125 jobs. Future expansion in these industries will depend on the mining industry's performance.

While mining is concentrated in the southern portion of the county, the northern portion plays host to most of the county's tourism. Tourist-related trade and services are an important and growing segment of the county's economy. The two industries accounted for 450 new jobs in 1990. With its cooler mountain climate, and close proximity to metropolitan Phoenix, northern Gila County attracts many visitors, especially in summer. Continuing growth in tourism will lead to increased demand for lodging, restaurants, and other trade and services. However, severe drought conditions in the forests north of Payson may retard tourism somewhat during the summer of 1991. This will be especially likely if the Forest Service closes large portions of the national forests to campers. As of this writing, it is still too early to tell if the snowpack of the 1990-91 winter is extensive enough to reverse the effects of previous years drought.

Along with trade and services, government also plays a major roll in Gila County's economy. Government added 100 jobs in 1990 creating new demand for clerks, secretaries, and maintenance workers. Finance, insurance, and real estate added 50 jobs in 1990 as well.

The outlook for Gila County is positive. It will continue to grow, especially in the trade and services sectors. New development at the Roosevelt Dam and a burgeoning population in the Phoenix metropolitan area will assure growing demand for Gila County amenities. The downside risk to Gila County, however remote, is a drop-off of tourist related activities due to protracted war with Iraq and associated declines in consumer confidence.

PINAL COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA

Pinal County has a fortunate location -- between Arizona's two major metropolitan areas of Phoenix and Tucson. In addition, two interstate freeways come together near Casa Grande, giving it a strategic location for transportation. Nevertheless, nonfarm wage and salary employment growth in Pinal County during 1990 was below the state average, coming in at 1.1 percent (325 jobs). The lackluster showing was primarily because employment in construction declined by 350 over the year. All other major industry groups posted gains in 1990.

Government is the largest employer in Pinal County, accounting for more than 30.0 percent of all nonfarm payroll jobs. The largest government employer is the maximum security state prison in Florence. Turnover opens frequent opportunities for corrections officers, guards, and clerks. Other government workers are employed by Central Arizona College, local school districts, the county, and the cities of Apache Junction, Casa Grande, Coolidge, Florence, and Eloy.

Pinal County is one of Arizona's five major agricultural counties. Cotton, grain , and alfalfa are principal crops. A supplement to the area water supply from the Central Arizona Project will ensure continuing production of agricultural products. Although the canal is not flowing at present due to conduit failure at river crossing points, repairs are in progress and expected to be completed by the middle of February 1991.

Mining also remains an important industry in Pinal County employing about 3,650. Although the industry experienced 1.4 percent growth during 1990, employment remains well below the 7,975 peak in June 1980.

Manufacturing, too, continues to be a source of new jobs in Pinal County, especially in the Casa Grande area. Manufacturing added 75 jobs during 1990. Because of the county's strategic location and an aggressive and capable economic development organization, continuing growth in the manufacturing sector is expected.

The trade and service industries, which account for 36.0 percent of wage and salary jobs in Pinal County, added 350 new jobs in 1990. Although these industries can be expected to grow along with basic industries, such as mining and manufacturing, Pinal County gets an additional boost from tourism and winter residents.

DES, Research Administration, forecasts Pinal County SDA's unemployment rates to average 7.2 percent in JTPA PY 1990 and 7.3 percent in PY 1991. These rates represents about 2,700 people in the ranks of the unemployed.

The proximity of Arizona's major metropolitan areas to Pinal County will continue to aid in development and also help provide a wide variety of occupational opportunities for the county's diverse economy.

GRAHAM COUNTY SERVICE DELIVERY AREA

The economy of Graham County is one based upon agriculture, government, trade, and services. Wage and Salary jobs fell slightly in 1989, but saw an increase of 250 positions, county wide, in 1990. The Research Administration forecasts Graham County unemployment rates to be 7.3 percent in JTPA PY 90 and 7.3 percent in PY 91.

Employment in government in Graham County will continue to be a principal source of job opportunities. There are over 2,200 employed in government, or approximately two out of every five nonfarm wage and salary jobs, in Graham County, are in government. Government employment includes jobs at the federal and state prisons, Eastern Arizona College, the municipal governments of Safford and Thatcher, Graham County and the local school districts. With the current hiring freeze on state government jobs, there may well be slower growth in the government sector in the future.

Although there are no mines in Graham County, the circumstances of the mining industry in neighboring Greenlee County have been very important to Graham County. Many miners live in Graham County and commute daily to Clifton and Morenci. An improved outlook in the copper mining industry offers hope for new opportunities in trade and services, especially in the Safford area which is the trade center for both counties.

Manufacturing, FIRE, and Services all added employment during 1990, with services seeing the biggest increase, adding about 75 jobs. All of the other industries held steady or lost employment. Health and social services offers the greatest potential for growth, with job opportunities for registered nurses, nurses aides, orderlies, and medical and dental assistants. Other potential job opportunities include food preparation and service workers, waiters and waitresses, janitors, maids, and first line supervisors.

The outlook for Graham County's economy is for stabilization. Improvement in the copper mining industry should generate some growth in the services and trade industries. Government will grow again when labor force and population growth picks up, if state budgetary problems are cleared up.

GREENLEE COUNTY SERVICE DELIVERY AREA

Wage and salary employment in Greenlee County increased marginally over the most recent JTPA program year. The unemployment rate in Greenlee County decreased in this period. The Research Administration forecasts Greenlee County's unemployment rates to be 8.5 percent in JTPA PY 1989 and 8.5 percent in PY 1990, representing about 250 unemployed.

Despite improvement in the mining industry, Greenlee County's economy has a long way to go to recover the jobs it has lost since the mining slump of 1982. Mining employment peaked at 2750 jobs in July of 1981. There are currently about 1,700 mining jobs. The present high price of copper notwithstanding, future job opportunities will be limited mostly to turnover of existing equipment operator and general laborer positions.

Government accounts for around twenty percent of the present employment base in Greenlee County. Actually, there are as many government jobs in Greenlee County today (about 600) as there were when mining employment was at its peak.

Trade and services have always been disproportionately small in Greenlee County. That's because Safford in neighboring Graham County is the trading center for both counties and the larger retail and services base in Safford continues to draw Greenlee County residents there.

Greenlee County's growth prospects, although marginally improved with the improvement in the copper mining industry, continue to depend on the need for economic diversification. Employment opportunities will exist for laborers, material movers and handlers, truck drivers, mechanics and repairer helpers, maintainance repairers, janitors, and waiters and waitresses.

LA PAZ COUNTY PORTION OF THE
LA PAZ/MOHAVE SERVICE DELIVERY AREA

The La Paz County economy grew marginally in JTPA program year 1989. Countywide, the number of nonfarm wage and salary jobs went up by 150. Gains were posted by transportation, communication, and public utilities (TCPU), services,and government. Other industries remained stable.

La Paz County as a whole is beat out only by Greenlee County for the position as Arizona's smallest. However, nonreservation La Paz County (La Paz SDA) assumes first rank over Greenlee County for "smallest" honors with a labor force of only 2,553 in PY 1990. Unemployment rates of 8.5 percent in PY 1990 and 8.5 percent in PY 1991 are forecast, which represents unemployment of about 220. Nearly one out of five of the SDA's residents are in poverty, however.

Economic activity in the county is centered in Parker and in support of water-based recreation along the Colorado River north of Parker to the Parker Dam. Additional trade and services are provided at locations near freeway interchanges of Interstate 10, the principal transportation corridor from Phoenix to Los Angeles, especially at Quartzsite and Ehrenberg. In the wintertime, Quartzsite bustles with hundreds of additional temporary residents camped in recreational vehicles.

The outlook for La Paz County is for stability, or very slow growth. Employment opportunities will occur for waiters and waitresses, cashiers, retail salespersons, food preparation and service workers, and janitors and cleaners. Most opportunities will be from turnover rather than growth, and many jobs will be seasonal. Opportunities for water-based recreation on the Colorado River will continue to draw increasing numbers of visitors from the population centers of southern California and from Phoenix.

MOHAVE COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA

The La Paz County economy grew marginally in JTPA program year 1989. Countywide, the number of nonfarm wage and salary jobs went up by 150. Gains were posted by transportation, communication, and public utilities (TCPU), services,and government. Other industries remained stable.

La Paz County as a whole is beat out only by Greenlee County for the position as Arizona's smallest. However, nonreservation La Paz County (La Paz SDA) assumes first rank over Greenlee County for "smallest" honors with a labor force of only 2,553 in PY 1990. Unemployment rates of 8.5 percent in PY 1990 and 8.5 percent in PY 1991 are forecast, which represents unemployment of about 220. Nearly one out of five of the SDA's residents are in poverty, however.

Economic activity in the county is centered in Parker and in support of water-based recreation along the Colorado River north of Parker to the Parker Dam. Additional trade and services are provided at locations near freeway interchanges of Interstate 10, the principal transportation corridor from Phoenix to Los Angeles, especially at Quartzsite and Ehrenberg. In the wintertime, Quartzsite bustles with hundreds of additional temporary residents camped in recreational vehicles.

The outlook for La Paz County is for stability, or very slow growth. Employment opportunities will occur for waiters and waitresses, cashiers, retail salespersons, food preparation and service workers, and janitors and cleaners. Most opportunities will be from turnover rather than growth, and many jobs will be seasonal. Opportunities for water-based recreation on the Colorado River will continue to draw increasing numbers of visitors from the population centers of southern California and from Phoenix.

MARICOPA COUNTY SERVICE DELIVERY AREA

The Maricopa County JTPA Service Delivery Area is composed of that portion of the county outside the City of Phoenix and less the Indian reservations. It includes the major communities of Chandler, Gilbert, Glendale, Mesa, Peoria, Scottsdale, Sun City, and Tempe, as well as many smaller communities and unincorporated areas of the county. These areas include some of the fastest growing communities in the country.

Rates of unemployment in this "Balance of Maricopa County" area are among the lowest in the state. The DES Research Administration forecasts the unemployment rates to be 4.2 percent in both JTPA PY 90-91 and PY 91-92. Despite being among the lowest rates in the state, they represent more than 20,000 unemployed while much higher rates in smaller counties often represent less than 1,000 unemployed. It is also possible that later forecasts made after the effects of the Persian Gulf war are known will be higher than these.

The Balance of Maricopa County also has the second lowest poverty rate in Arizona - 9.5 percent. Nevertheless, this represents more than 109,000 people who are economically disadvantaged. Pockets of poverty exist both within the environs of otherwise well-off communities, as in Guadalupe which is surrounded by Tempe and Phoenix, and in more remote locations such as Gila Bend which is well-outside the Phoenix metropolitan area.

Although the Balance of Maricopa County's employee/resident worker ratio of 87.1 implies there is a great deal of commuting by workers into the City of Phoenix, the cities adjoining Phoenix are more than bedroom communities. All have substantial manufacturing as well as trade and services facilities.

But just as Phoenix's economy cannot be analyzed without reference to the whole Phoenix metropolitan area, neither can the Balance of Maricopa County's economy be analyzed without reference to Phoenix. Maricopa County is a single labor market in which workers can change jobs without changing residences. Of course this implies a certain level of mobility, and one's willingness and ability to commute rises and falls with the level of pay offered.

Maricopa County's economy as measured by job growth was the fastest growing in the nation during 1983, 1984, and 1985. It dropped to 49th in early 1988, but bounced back among the top 20 metropolitan areas in late 1989. From December 1989 to December 1990, Maricopa County added 28,800 jobs and grew at a rate of 2.9 percent, four times the nation's job growth rate.

Most new job opportunities will be found in the trade and services sectors. Construction is still on a slide that began four years ago, although the rate of decline is slowing. It is not forecast to end its decline in the next two years. Manufacturing, too, will decline slightly over the next two years, so most opportunities will be from turnover. Transportation has been the area's fastest growing industry in the last two years, but its continuing prosperity is threatened by rising oil prices. Events in the Persian Gulf may determine the fortune of the transportation industry in Arizona during 1991 and 1992.

JTPA service deliverers face the challenge of shrinking the poverty pockets by training eligible clients for jobs sufficiently well-compensated to lift them from poverty. There may be the additional challenge of placing JTPA trainees at a time when many other skilled workers are being layed off and will be competing for the same jobs.

PHOENIX SERVICE DELIVERY AREA

The City of Phoenix is the heart of Arizona's largest labor market having a labor force of more than a million people. The City's portion of that metropolitan labor force is about 600,000. The area economy has suffered some job losses among its goods-producing sector over the last few years, but service sector job growth has made up the difference. The DES Research Administration forecasts the City's unemployment rate to be 4.6 percent in JTPA PY 90-91 and in PY 91-92 representing 27,600 unemployed.

Phoenix has a large and diverse economy ranking it among the wealthier areas of the state, but it does have pockets of poverty as do most other major cities of its size. The Phoenix poverty rate is 11 percent, meaning there are more than 107,000 economically disadvantaged living in Phoenix.

Workers' willingness to commute substantial distances between home and work makes it unrealistic to analyze Phoenix's economy separate from the whole of Maricopa County. Its employee/resident worker ratio of 111 does substantiate that more workers commute to Phoenix than commute from it, however. It has more in-commuting because it is the seat of state and county government as well as the financial center of the state.

Almost 20,000 jobs were created in the Phoenix metropolitan labor market in 1990, (December to December, prebenchmarked) That represents a growth rate of 1.9 percent, better than twice the growth rate the nation enjoyed in the same period. Between 1983 and 1986, the Phoenix area job market was the nation's fastest growing. Since 1986, there has been substantial loss of jobs in construction and in related employment in finance, insurance, and real estate (FIRE), because of over-building during the boom. Although construction employment has not stopped declining, its rate of decline has slowed. Manufacturing, too, lost about 1,300 jobs in 1990.

Despite these losses there has been net job gain, because transportation, services and trade have continued to grow. In 1990 transportation added 3,400 jobs while services and trade together added more than 20,000 jobs. Government, too, added another 7,000.

While the outlook for the Phoenix area labor market, as for the state as a whole, is uncertain because of the ongoing war in the Persian Gulf, Phoenix will probably fair better than other parts of the country. If the war is short, there will probably be some job growth in the Phoenix area.

Challenges for JTPA service deliverers lie in training that sector of the economically disadvantaged population that can be lifted out of poverty by qualifying them for better-paying jobs. No labor market in the state offers a greater variety of opportunities.

NAVAJO COUNTY SERVICE DELIVERY AREA

The Navajo County SDA is composed of the nonreservation portion of Navajo County. It excludes the Navajo and Hopi Reservation lands on the north and the Apache Reservation lands on the south. The remaining land available for private economic activities constitutes about one third of all of Navajo County. It's chief economic assets are: 1)Interstate 40, the principal and most direct route between Chicago and Los Angeles. Interstate 40 follows approximately the path of the historical and storied federal route 66, although remnants of the old route remain. 2) The White Mountains and all their recreation resources for summer and winter, as well as logging resources. 3) The Cholla Power Plant, a coal-fired plant providing power to urban areas of central and southern Arizona.

Navajo County nonfarm wage and salary jobs grew 2.9 percent from December 1989 to December 1990 adding about 600 jobs. Government added 575 of those jobs, although there were gains by Services, Construction, and Manufacturing as well. Transportation, Communication, and Public Utilities (TCPU), which is dominated by the Cholla power plant, lost 150 jobs. Mining and Trade also lost employment over the year.

Better than one in four jobs in Navajo County is in some way associated with government. Government entities range from local government special districts to units of the U.S. Department of Agriculture, Forest Service. Much of Services employment is also government related, because Indian tribal governments are classified among services.

Professional, paraprofessional, and technical jobs in Navajo County government have high concentrations among Foresters and Conservation Scientists, Teachers and Instructors of Vocational Education and Training, Teacher Aides, Registered Nurses and Licensed Practical Nurses. Among Clerical and Administrative Support occupations greater concentrations of jobs are in Secretaries, Typists, General Office Clerks, and Dispatchers for police, fire and ambulance services. Service jobs have concentrations among Police, Firefighters (including seasonal forest firefighters), Cooks, and Janitors and Cleaners. Production jobs are concentrated among Maintenance Repairers, Highway Maintenance Workers, and Motor Vehicle Operators.

Much of the growth in services was to serve tourism along Interstate 40 in Holbrook and Winslow, and in the White Mountains in the population centers of Showlow, Pinetop and Lakeside. With improvements to the Sunrise skiing area now in place, winter tourism should be enhanced, drawing more business to nearby Pinetop and Lakeside as well. As the urban populations of Arizona grow, the mountain areas of Navajo County will continue to attract increasing summer tourism and second home buyers.

Nonreservation Navajo County's unemployment rate is forecast to average 8.0 percent in JTPA PY 90-91 and PY 91-92. The poverty rate is 12.5 percent of the population which just about matches the state 12.7 percent average.

Navajo County's economy has experienced some diversification over the past few years adding a new corrections facility, expansion at the Sunrise Ski Resort, a hat manufacturer, new and expanded hotels and motels, and improved roads and highways. Continuing diversification will enhance Navajo County's economic outlook.

PIMA COUNTY SERVICE DELIVERY AREA

The Pima County JTPA Service Delivery Area includes the City of Tucson, Arizona's second largest city, but does not include surrounding Indian reservations. Pima County as a whole represents Arizona's number two labor market having a labor force of almost 320,000 in 1990. The DES Research Administration forecasts Pima County SDA's unemployment rates to average 4.3 percent in JTPA PY 90-91 and 4.6 percent in PY 91-92, representing about 14,000 and 15,000 unemployed, respectively.

Pima County's labor force shrunk substantially through 1989 losing 9,000 (December to December - prebenchmarked). That was the main reason for Pima County's relatively low unemployment rates (3.5 percent in December 1989). Job growth in 1989 was abysmal posting only 500 new jobs. Substantial job losses in 1989 occurred in manufacturing (2,500), construction (1,700), finance, insurance, and real estate (FIRE, 800) and hotels (700). Net gain in total payroll jobs was possible only because of growth in mining (100), trade (1,900), services (1,900) and government (1,400).

In 1990 Pima County enjoyed modest recovery adding 1,500 back to its labor force and 4,400 payroll jobs, although its unemployment rate climbed to 4.3 percent. Construction lost another 500 jobs, but gains were posted by mining (200), trade (200), services (3,000) and government (1,300). While hotels gained back 500, health services grew 1,600 or 7.5 percent. There was no improvement in manufacturing, but no additional substantial losses either.

Pima County's near-term outlook is clouded by events in the Persian Gulf and its consequent effect on the national recession. A short war will probably mean a short recession and a rebounding of the national economy. If that is the course of events, Pima County will not suffer much more than it already has. If the war is drawn out, the national recession may last a full year, and some loss of payroll jobs can be expected. One bright side to the otherwise negative aspects of a war is that Tucson's defense industry may get some new orders for replacement of expended missles. Davis-Monthon Air Force Base may also see additional activity.

Pima County's JTPA programs have been fortunate in one respect. Job losses in 1989 did not translate to higher unemployment. Rather, workers either left town or just dropped out of the labor force.

From Pima County's size alone, there will be some job opportunities for completers of JTPA programs. Most jobs will be from turnover and separations from the labor force rather than growth, but there is great diversity in the Pima County economy. Pima County's poverty rate (12.2%) is about at the state average (12.7) representing more than 145,000 economically disadvantaged, so the challenge for JTPA service deliverers is to reduce that rate.

SANTA CRUZ COUNTY SERVICE DELIVERY AREA

During JTPA program year 1989, the wage and salary employment growth rate in Santa Cruz County was over three percent. Nevertheless, Santa Cruz County's unemployment rate will remain one of the highest in Arizona. The DES Research Administration forecasts Santa Cruz County's unemployment rate to be 13.0 percent in JTPA PY 1990 and 13.0 percent in JTPA PY 1991.

Trade, services, and government account for over three quarters of the wage and salary jobs in Santa Cruz County (about 8,800 out of 11,000 jobs.) The location of this county on the U.S.-Mexico border and its site as an international transportation thoroughfare produces about 5,000 jobs in wholesale and retail trade. The ability of Santa Cruz County to create new jobs in trade and services is directly related to the Mexican as well as the U.S. economy. Because Mexico's economy has been restructured and is recovering since it suffered a set-back from oil price depreciation, there have been growing economic opportunities in Nogales and the balance of Santa Cruz County.

Also because of this link to the Mexican economy, the health of the Mexican peso strongly influences the demand for goods on the Arizona side of the border. Because there have been no major inflation surges in the Mexican economy during the recent past, demand for Arizona goods has been fairly stable, and trade employment has grown. Nevertheless, another inflation surge in Mexico of the kind that occurred in the early 80's could once again send border trade employment into a decline, close many stores, and deflate rents. It would take a major economic shock, or political instability in Mexico, to cause another surge in Mexican inflation, however.

Santa Cruz County's border location also presents unique opportunities for manufacturing. Indeed, electronics machinery manufacturing has shown long-term growth, much of it associated with maquiladora plants (twin plants) in which American components are assembled on the Mexican side of the border, and returned to the American side for further processing. Growth occupations associated with the electronics machinery manufacturing industry include production supervisors, inspectors, testers, graders, and sorters, purchasing agents, and production managers.

Over the next two years, the Santa Cruz County economy is expected to grow at moderate rates making some new opportunities, but the majority of job openings will be from turnover.

Santa Cruz County has an 18.1 percent poverty rate, half again the state average. It is also a bilingual county with more than two thirds if its population speaking a language other than English at home. Nearly one out of six of its population does not speak English well.

YAVAPAI COUNTY SERVICE DELIVERY AREA

Yavapai County's economy grew 8.0 percent in JTPA PY 1989 adding 2,075 nonfarm wage and salary jobs. This was a significantly higher growth rate than the state average (3.9 percent) during the same period. Every industry enjoyed growth except finance, insurance, and real estate (FIRE), which held steady. Construction added 475 jobs growing 21.1 percent over the year. Government showed an increase of 625 from July to July, a 14.5 percent increase.

Yavapai County has been one of the most economically successful nonmetropolitan counties, competing on a regular basis with neighboring Mohave County for the lowest nonmetropolitan county unemployment rate. Unemployment rates for nonreservation Yavapai County are projected to be 5.1 percent in JTPA PY 1990 and 5.1 percent in JTPA PY 1991. The poverty rate in the Yavapai County SDA is 12.6 percent, nearly equal to the state average (12.7 percent).

Tourism is an economic factor of growing importance to the Yavapai County. In PY 1989, 750 jobs were added by trade and services to serve tourism as well as the local population. Prescott and Prescott Valley are the trade centers surrounded by the Prescott National Forest and its many recreation sites. The Verde Valley, including the towns of Camp Verde, Cottonwood, and Clarkdale, is experiencing significant growth as well. Prescott and other towns of Yavapai County are also popular retirement centers.

Yavapai County's diversified economy has left it with a long list of industries enjoying long term growth: automotive repair services, business services, general and special trade construction contractors, depository institutions, eating and drinking places, health services, insurance agencies, legal services, lumber and wood products manufacturing, printing and publishing, and wholesale trade.

The outlook for Yavapai County is for continued growth, and continuing economic performance superior to most of the other nonmetropolitan counties.

YUMA COUNTY SERVICE DELIVERY AREA

The economy of Yuma County has experienced modest employment growth over the past year. (Nonfarm wage and salary employment grew 2.3 percent from January 1990 to January 1991.) Nevertheless, Yuma County is forecast to continue having the highest unemployment rates in the state,17.3 percent during PY 1990 and 17.4 percent in PY 1991.

Agriculture, government, trade, and services account for the largest portion of employment in Yuma County. Seasonality is a significant factor in the Yuma County economy. Both agriculture and tourism seasons peak in the winter creating the greatest number of jobs. In the summer, unemployment rises especially among agricultural workers and those employed in trade and services who served winter tourists. Government as a nonseasonal source of jobs offers a stabilizing component to the area economy. Government employment includes jobs at the Marine Corp Air Station, Yuma Proving Grounds (Army), Arizona Western College, and the City and County of Yuma.

The tourism industry in Yuma County will continue to enhance the prospects for employment in trade and services. Urbanization of southern California and Arizona will increase recreational activity along the Colorado River and annual influxes of temporary winter residents will continue to increase the demand for services.

Yuma County manufacturing has suffered modest decline over the last year. In fact, apparel manufacturing has been in a long term decline. Still, there are approximately 2,300 currently employed in manufacturing in Yuma County. Most factory job opportunities will result from turnover rather than growth in the near term, however.

The outlook for Yuma County is for continued slow growth. Local economic developers should be working to diversify the economy in order to mitigate off-season unemployment. More jobs in manufacturing, transportation, communication, and public utilities (TCPU) and nonseasonal trade and services would help.

TRIBAL SERVICE DELIVERY AREA

The Tribal Service Delivery Area (Tribal SDA) is comprised of 19 reservations located throughout the state. The Arizona Department of Economic Security serves as Grant Recipient for the Tribal SDA. Eight tribal governments and the Indian Development District of Arizona serve as administrative entities, contracting with the State of Arizona to provide JTPA services on the reservations. The Tribal SDA's Title II-A and Title II-B allocations are distributed to its administrative entities based on a population formula using current Bureau of Indian Affairs (BIA) data.

The DES Research Administration forecasts the Tribal SDA's unemployment rates to be 13.9 percent in JTPA PY 1990 and 14.0 in PY 1991. In both cases, the rates represent about 3,200 unemployed. Because there are few opportunities for employment on the reservations, there are many who would look for work if they believed it was available, but do not look because they don't expect to find anything. These are the "discouraged unemployed" and are not counted among official Department of Labor unemployed since the definition requires a job search effort. Therefore, official unemployment rates probably understate the problem of unemployment on the reservations.

The poverty rate for the Tribal SDA may be a better measure of the degree of economic hardship that does exist on the reservations. The Tribal SDA's poverty rate is 38.8 percent, three times the state average.

Another important demographic characteristic of the reservations is that there is a higher proportion of youth than there is among the state's population as a whole. In addition, there is a high proportion of reservation residents who speak a language other than English at home (often a native language such as Hopi), and, therefore, there is a substantial proportion who do not speak English well.

Although many engage in traditional arts and crafts (e.g., silver and turquoise jewelry making , pottery making, or basket or textile weaving), crafts sales, except by a few well-known people, are generally seasonal. In addition, craft sales do not represent sufficient economic opportunity to provide more than a subsistence level of earnings for most craftspeople. No significant change is anticipated for this industry in the near future.

The various social, health, education, and job training programs funded by local, state, and federal governments supply more than 90 percent of all available employment on the reservations. Past government budget reductions have resulted in layoffs of employees on most reservations. Simultaneously, the tribal governments have experienced reductions of revenue derived from tribal resources, resulting in additional layoffs.

There are a limited number of employment opportunities on reservations in the private sector, including tribal owned enterprises. Also, there is a tendency toward turnover in these jobs as employees find more attractive career opportunities off the reservations. No significant growth in the reservations' private sector is anticipated in the near future.

NAVAJO NATION SERVICE DELIVERY AREA

The Arizona Navajo Nation Service Delivery Area, located in the northeastern quadrant of the state, covers approximately 15,664 square miles, or roughly more than 10 million acres. It occupies the major portions of Apache and Navajo Counties, and approximately a third of Coconino County.

The Navajo Nation is a direct service provider through governmental subunits representing five major geographical regions referred to as agencies. These agencies are subdivided into districts and chapters. The chapters are the local units of government, and combinations of several chapters comprise districts. The Arizona portion of the Navajo Nation is served by four agencies - Tuba City, Chinle, Fort Defiance, and Shiprock. Boundaries of the Shiprock and Fort Defiance Agencies extend into New Mexico, as does Tuba City into Utah. A total of 58 chapters make up the Navajo Nation JTPA Service Delivery Area in Arizona.

The DES Research Administration forecasts the Navajo Nation unemployment rates to be 13.6 percent in JTPA PY 1990 and 13.6 percent in PY 1991. Both rates represent about 3,000 unemployed. The Navajo Nation poverty rate is the state's highest at 47.8 percent.

The Navajo Nation's current goal is to develop the private sector. Progress has been slow for commercial and industrial development . In reaching for this goal, some the strategies include: 1) developing tribal enterprises to promote small business development, 2) developing Navajo financial institutions, 3) promoting tourism, and 4) developing energy resources. These strategies are intended to build up the private sector, increase opportunities for Navajo entrepreneurs, and create employment opportunities for the Navajo people.

Government, services and mining are the three industrial sectors that cumulatively comprise over 70 percent of employment on the Navajo Reservation. Coal mining will remain stable as the Navajo Tribe is mostly an exporter of Tribal natural resources.

The goal of the Navajo JTPA program is to provide Navajo people with training opportunities and employment experience consistent with labor market demand. In addition to making employment opportunities available through economic development, the Navajo Department of Employment and Training must assure that the Navajo people are prepared to take advantage of those opportunities.

An additional goal of the Navajo Nation Service Delivery Area is to promote maximum use of training and retraining resources to prepare the Reservation work force and strengthen the Navajo Nation's economy. The Navajo Nation's Department of Employment and Training recognizes the characteristics of the Service Delivery Area, and will emphasize appropriate job training directed at growth occupations and labor market demand.

APPENDIX OF MISCELLANEOUS TABLES

POVERTY INCOME GUIDELINES
EFFECTIVE APRIL 19, 1991

FAMILY SIZE	POVERTY GUIDELINES
1	$ 6,620
2	8,880
3	11,140
4	13,400
5	15,660
6	17,920
7	20,180
8	22,440

For each additional family member add $2,260.

SOURCE: U.S. Department of Health and Human Services, February 1991.

LOWER LIVING STANDARD INCOME LEVEL
(70 PERCENT LLSIL)
EFFECTIVE APRIL 13, 1990

FAMILY SIZE	METROPOLITAN INCOME	NONMETROPOLITAN INCOME
1	$ 5,450	$ 5,380
2	8,930	8,810
3	12,260	12,100
4	15,130	14,930
5	17,860	17,620
6	20,880	20,610
For each additional person add	$ 3,020	$ 2,990

NOTE: These figures are only for the purpose of determining eligibility for JTPA programs and should not be used for any other statistical purposes. Since the Bureau of Labor Statistics has not revised the lower living family budget (on which the LLSIL is based) since 1981, ETA used consumer price index changes to update the LLSIL to meet JTPA requirements.

SOURCE: U.S. Department of Labor, Employment and Training Administration, April 1990.

Navajo Nation SDA	6,799	19,086	55.36	x .40 + 40	62.14
UNITED STATES	5,417,178	23,625,720			

The adjustment factor is calculated by dividing the ratio of the local economically disadvantaged youth to adults by the national ratio (22.93 percent) and substracting 1 from the result.

((Local ED Youth/Local ED Adults)/.2293) - 1 * 100 = Adjustment Factor

The adjustment factor represents the difference between the youth/adult makeup of the economically disadvantaged population in the local SDA and the national youth/adult composition.

DECLINING INDUSTRIES AND OCCUPATIONS

The attached list of declining nonagricultural and nongovernmental industries was determined by using multiple data sources, including Unemployment Insurance reports and local periodicals. A seven-year span of information, from mid-1981 to mid-1988, was used in order to negate the effects of the business cycle, and to reveal true structural change of the economy. In parentheses after each industry is the corresponding two-digit code from the 1987 Standard Industrial Classification Manual.

The corresponding list of occupations was determined by examining Occupational Employment Statistics (OES) data. For each declining industry, those occupations having greater than a third of their county employment in the declining industry are included. Those occupations with a third or less of their employment in the declining industry can be expected to have other opportunities for employment within the labor market. In addition, occupations were listed if they were within the ten occupations with the highest numbers in that declining industry. Occupational information by industry is not available if an industry is not surveyed by OES, if listing an occupation would violate the confidentiality standards of the OES program, or if an occupation has fewer than five employees within an industry. The occupations are listed, along with their OES codes, in descending order by employment level.

STATE OF ARIZONA

POPULATION

Arizona population on July 1, 1991, and July 1, 1992, according to official projections, will be 3,763,350 and 3,850,800, respectively. Projections for this *Annual Planning Information* report were generated by the Population Statistics' Demographic Cohort-Survival Model and approved by the Arizona Department of Economic Security Director on October 1, 1991.

Official Arizona projections for population growth between 1990 and 1991 imply a growth rate of 2.2 percent, a slower rate than the estimated 1980s decade average of 3.5 percent. Growth between 1991 and 1992 is projected to be similarly slow at 2.3 percent. Nevertheless, these growth rates are still more than the projected national average.

The U.S Department of Commerce projects Arizona to be the second fastest growing state in the decade of the 1990s with annual average growth rates of 1.8 percent. The national annual average growth rate of the same period is projected to be only 0.7 percent.

INCOME

Arizona total personal income grew at a slower rate than national total personal income in 1988 and 1989. Arizona, in 1990, continued this trend with total personal income growing at a rate of 5.9 percent, or 0.6 percent slower than the national rate of 6.5 percent, according to the U.S. Department of Commerce.

Arizona had per capita personal income of $16,012 in 1990 which was 86 percent of the $18,691 U.S. level. The growth rate for per capita personal income at 4.2 percent in 1990 was slower than the U.S. rate of 5.4 percent, implying that Arizona lost ground in its advance toward the national average. Commerce projections for per capita personal income growth show Arizona just barely keeping pace with the national average rate of growth to the year 2000. Granting those projections are valid, the gap between Arizona and U.S. per capita incomes will not be closed in the decade of the 1990s.

TOTAL EMPLOYMENT
(By Residence of Worker)

Arizona total employment fell by 2.3 percent between September 1990 and September 1991, achieving a level of 1,614,600. Arizona's employment to population ratio in September 1991 was 58.6 percent compared to the U.S. ratio of 61.6 percent. The lower ratio in Arizona may be part of the reason for lower per capita incomes in Arizona. Arizona's labor force participation rate at 62.6 percent was also lower than the national rate (66.0 percent).

DES Research Administration forecasts of total employment for JTPA Program Year (PY) 91-92 and PY 92-93 are 1,630,240 and 1,676,882, respectively. The forecast for total employment growth between PY 91-92 and PY 92-93 is 2.9 percent. Rates of growth and consequently total employment levels may be revised downward by subsequent forecasts.

JOBS
(By Worker's Place of Work)

The job growth rate in Arizona was a full percentage point higher than the national rate, in 1990. Arizona's growth rate was 2.5 percent versus the U.S. rate of 1.5 percent. The total number of nonfarm payroll jobs in Arizona averaged 1,490,900 in 1990.

Despite outperforming the nation in creating jobs during 1990, the 36,400 jobs created were fewer than the average (57,600) created during the economic expansionary period since 1982. Growth in 1990 was well below the peak growth year of 1984 when 104,100 jobs were created and Arizona was enjoying a construction and real estate boom. The average for the first nine months of 1991 (January to September) is only 19,300, or about half the number of jobs created in 1990. This relatively low number, is due in large part, to the effects the national recession has had on the Arizona economy.

JOB CREATION, THE ECONOMY AND WAR

The outlook for job creation two years into the future is more uncertain than usual. There is a consensus among economists that a national recession began during the fourth quarter of 1990. There is also agreement among many, although not all, economists that this recessionary period has so far been less severe than previous ones.

The depth and duration of the recession is still open to debate. Arizona can survive a short national recession and still create some jobs in 1991. The Arizona economy probably won't continue to create jobs if the national recession lasts for more than a year. Nevertheless, Arizona's economy will probably rebound faster than the nations, because construction employment is already pared by a third, manufacturing inventories are lean, and population is growing.

UNEMPLOYMENT

The Arizona unemployment rate climbed to 5.4 percent by September 1991, 1.3 percent below the national rate of 6.7 percent. The DES Research Administration in August 1991 forecasted the state unemployment rate to be 5.2 percent in PY 91-92 and 5.3 percent in PY 92-93.

Each percentage point of Arizona's unemployment rate represents approximately 17,100 unemployed. The forecasted rate for PY 91-92 of 5.2 percent implies 89,369 unemployed.

POVERTY

Until 1990 census data are available, Arizona's poverty rate remains reported at 12.7 percent, and estimates of the number of individuals in poverty are made by multiplying that rate by the forecast of the total population. Consequently the number of individuals in poverty in Arizona is projected to be 477,945 in 1991.

Poverty rates determined from the 1980 census varied across the JTPA SDAs from a low of 8.8 percent in Greenlee County to a high of 47.8 percent on the Navajo Nation. While the condition of poverty is permeated throughout the reservations as indicated by their high poverty rates, there are more people in poverty in the urban areas of Maricopa and Pima Counties. The largest number (109,011 in 1990) among the SDAs is in the Balance of Maricopa County.

JTPA'S IMPACT ON UNEMPLOYMENT AND POVERTY

When 1990 census data becomes available in detail, it may be possible to give some assessment whether JTPA and other programs of the 1980s had any significant impact on the incidence of poverty. At least we will know if the incidence of poverty has declined or grown over the decade.

An assessment is always complicated, however, by where the economy was in relation to the business cycle when the census was taken. In 1990 the U.S. was in the eighth year of a business expansion. In 1980, the nation was in a moderate recession. From the difference in those circumstances alone, there should be some improvement in poverty rates from 1980 to 1990.

Impacts on unemployment are even harder to assess. There will always be "natural" unemployment just from the normal circumstance of people changing jobs in search of something better. Programs like JTPA are directed primarily toward structural unemployment. Structural unemployment occurs when the skills of the labor force are different from those in demand by employers, or from geographic pockets of insufficient economic activity. This may be caused by competitive factors on a world scale, by the advancement of technology at a faster pace than the labor force of a given area is keeping up, or by pockets of low economic activity resulting from areas being geographically remote from major centers of economic activity. Many areas of Arizona's rural counties fall into the latter category.

A third kind of unemployment, cyclical unemployment, occurs when the economy moves from an expansionary period into a recession. The nation was experiencing that kind of unemployment in the final quarter of 1990, and will probably experience more in the first half of 1991. In Arizona, the construction industry has been experiencing cyclical unemployment since 1986. Cyclical unemployment of a total economy (not just one industry) is more effectively combatted by assistance from government in improving the economy and creating jobs.

JTPA AND PERFORMANCE STANDARDS

Better indicators of JTPA's success are the U.S. Department of Labor's JTPA performance standards. The Labor Department offers a mechanism to adjust these standards to account for differences in local client mix from the national average of all SDAs in the previous program year, and the differences in economic circumstances.

The latest complete data available on Arizona performance were for PY 88-89. These show success by most SDAs in being able to place, or improve the earnings of, client adults to a degree greater than that of the lowest quartile of all the nation's SDAs. The urban center and Indian reservation SDAs had the most difficulty in out-performing national low quartile performance on adult placement measures. They had more relative success with wage improvement efforts.

In advance of the nation's effort toward welfare reform, Arizona JTPA has been encouraging special efforts toward welfare clients. Response from SDAs has been mixed. Welfare follow-up employment retention rates have exceeded the national low quartile rate by slightly more than half (9) of Arizona's 16 SDAs. Exactly half exceeded the Arizona average retention rate for welfare clients.

JTPA services to youth have enhanced employability by an amount greater than the national low quartile in 11 of Arizona's SDAs. Ten Arizona SDAs had greater than national low quartile youth placement rates.

APACHE COUNTY SERVICE DELIVERY AREA

Economic activity in Apache County was up slightly as of September 1991. On a countywide basis, total nonfarm wage and salary employment grew by 5.2 percent, from September 1990 levels, adding 775 jobs. The total civilian labor force was down by 475, a decline in total unemployment accounted for 350 of this number. The decline in total unemployment helped lower the unemployment rate to 13.3 percent as of September 1991.

Over the next two years, Apache County's economy is expected to remain fairly stable with little or no growth. The nonreservation portion of Apache County will experience an unemployment rate of 9.8 percent in JTPA PY 91-92, and will likely increase to a double-digit level of 10.7 percent in PY 92-93. These unemployment rates represent between 400 and 450 unemployed.

Government employs the largest number of people in Apache County accounting for one-third of the wage and salary positions. Employment in government is expected to remain stable in the coming JTPA program years. However, turnover will still provide a number of job opportunities.

Services and trade, which account for over 40.0 percent of wage and salary employment in Apache County, will be the largest contributor of job opportunities in the coming program years. Many job opportunities will be in tourism related occupations such as cashiers, retail salespeople, maids, housekeepers, stock clerks, waiters and waitresses, food preparation workers and cooks. Job opportunities outside tourism will be abundant for secretaries, clerical and administrative support workers, bookkeepers, and accounting and auditing clerks. The majority of these openings will be the direct result of job turnover.

Surprisingly, both construction and manufacturing employment showed employment gains as of September 1991, up 150 and 75 jobs respectively from September 1990 levels. Employment opportunities in these industries will be few as those currently holding jobs will be reluctant to change positions in a tight labor market.

Overall, the outlook for Apache County's economy over the next two years is for employment stability with a slight chance of very slow employment growth. The bulk of job opportunities will be a result of turnover and will be in retail trade, restaurants, and hotels and motels. Tourist from Arizona's urban centers will continue to flock to the White Mountains for cold-weather sports activities in winter and to get out of the heat during the long-hot summers. The small towns of the nonreservation portion of Apache County will be the primary beneficiaries of the constant flow of tourists into the region.

COCHISE COUNTY SERVICE DELIVERY AREA

Cochise County, better known as "Tombstone Territory" to the nation's television watchers of the 1950's, is Arizona's southeastern-most county. It borders Mexico and New Mexico, and retains an ambiance of the old west that is vanishing in much of modern Arizona. Despite its colorful history of Chiracahua Apache presence, and its namesake, the most famous of the old-west Apaches, Cochise County has no Indian reservations. Therefore, the boundaries of Cochise County and its JTPA Service Delivery Area are one and the same.

Although Cochise County tourists can taste the flavor of the old west in places like the Crystal Palace in Tombstone, or in any saloon in Bisbee's Brewery Gulch, Cochise County is well-involved in modern economic events. Fort Huachuca, established more than 100 years ago to protect settlers from Indian raids, is today a dominant feature of the local economy. Better than 40.0 percent of Cochise County workers are employed by government, and a large portion of those are employed by the Army at Fort Huachuca. Today, Fort Huachuca is a high-tech facility involved with electronic communication and equipment testing.

Just outside Fort Huachuca's gate is the City of Sierra Vista, which has been one of the fastest growing communities in the state. Sierra Vista serves as the trade and services center for the Army post, and increasingly, for much of Cochise County. While government plays a large role in the county's economy, trade; services; transportation, communication, and public utilities (TCPU); and manufacturing are also important industries. The service-producing industries, TCPU, trade, finance, insurance, and real estate (FIRE), services, and government, account for 91.6 percent of the wage and salary jobs in Cochise County.

Cochise County lost 950 nonfarm wage and salary jobs from September 1990 to September 1991, for a growth rate of negative 3.6 percent. This rate represents a considerable slowdown relative to past years and is one of only three counties to experience negative over the year job growth as of September 1991. The other two counties experiencing negative growth are Navajo and Yuma. Manufacturing, FIRE, services, and government were the only industries to experience employment growth in September. All other industries held steady, neither gaining nor losing employment. Government increased the most, adding 125 jobs. Worthy of note is that government not only includes civilian employment at Fort Huachuca, but school employment at Cochise County Community College and at primary and secondary schools, as well as the correctional facility near Douglas.

The next two years holds much uncertainty for Cochise County. The downsizing of Fort Huachuca, and the associated loss of civilian and military personnel, will most likely be offset by the realignment that is bringing military personnel to Fort Huachuca from Fort Devins. This shift should lead to an even more service oriented economy in Cochise County. The unemployment rate for JTPA PY 91-92 is forecast to be 6.7 percent, and 7.2 percent in JTPA PY 92-93. This represents about 2,450 and 2,675 unemployed respectively. Overall, the outlook for Cochise County is uncertain, future events may lead to further reductions in employment.

COCONINO COUNTY SERVICE DELIVERY AREA

Coconino County's economy slowed in 1991, and nonfarm wage and salary jobs increased by only 1.5 percent from September 1990 to September 1991. Mining, construction, transportation, communications, and public utilities (TCPU), and trade all experienced over-the-year employment losses.

With the nation and the state experiencing trouble in the manufacturing and constructions industries, Coconino County surprisingly had added 225 manufacturing jobs as of September 1991, for a growth rate of 6.8 percent over September 1990 levels. Construction, on the other hand mirrored the losses occurring at the state and national level, losing 25 positions.

Trade employment was down, as of September 1991, losing 25 positions. Growth in trade has helped Coconino County experience remarkable growth over the last several years. The Flagstaff area is the primary beneficiary of this growth and employment loses in this area threaten its position as northern Arizona's foremost trade center. Services' employment growth has slowed in 1991, with only 200 new jobs being added as of September 1991. This translates in to a growth rate of only 1.8 percent, and much of the new employment came from new and expanded hotels and motels.

Government has had an off year as well, growing only 2.9 percent over the year. Government, although not having the best September to September job growth rate, did add the most new positions, posting a gain of 375.

Coconino County's economy is sufficiently well diversified to offer many occupational opportunities. Consult Coconino County's "Growing Industries and Occupations" list or *Occupational Employment Forecasts* for a complete accounting. Important economic centers include Flagstaff, Williams, Page, and Grand Canyon Village. Williams achieved a major economic landmark in 1989 with the opening of the Williams to Grand Canyon Railroad. The continuing success of the railroad will offer opportunity for more tourist type development in the Williams area.

The nonreservation Coconino County unemployment rate is forecast to average 5.9 percent in JTPA PY 1991-92 and 6.4 percent in JTPA PY 1992-93. These are among the lowest nonmetropolitan county unemployment rates in Arizona, with only Yavapai County having lower rates. These rates reflect approximately 2300 and 2525 people in the ranks of the unemployed.

The outlook for the nonreservation portion of Coconino County remains positive. Continuing economic growth and diversification can be expected over the next two years. The effects of the national recession may slow tourist activity in the county and result in lower activity in the trade and services industries.

GILA COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA

Gila County's over-the-year nonfarm wage and salary job growth rate, as of September 1991, was 2.4 percent (275 jobs). DES, Research Administration, forecasts Gila County unemployment rates to average 6.7 percent in JTPA PY 1991-92 and 7.3 percent in PY 1992-93. These rates represent between 800 and 900 people unemployed.

Formerly, the Gila County Service Delivery Area had been dependent upon the mining industry for its economic health. While mining still accounts for an important part of the area's nonfarm wage and salary employment (11.5%), it is no longer the sole determinant of area's economic well-being. In recent years, the mining industry has shown signs of improvement -- the result of favorable copper prices on world markets. However, mining employment in Gila County was unchanged as of September 1991 from September 1990 levels. Copper prices are expected to soften somewhat in the coming years and therefore we can expect little, if any, growth in this sector. Manufacturing sectors that are closely allied with the mining industry -- such as primary metals; and stone, clay and glass -- showed improvement as of September 1991, adding 25 jobs over-the-year. Future expansion in these industries will depend on the mining industry's performance.

While mining is concentrated in the southern portion of the county, the northern portion plays host to most of the county's tourism. Tourist-related trade and services are an important and growing segment of the county's economy, but add only a combined 25 positions as of September 1991. With its cooler mountain climate, and close proximity to metropolitan Phoenix, northern Gila County attracts many visitors, especially in summer. Continuing growth in tourism will lead to increased demand for lodging, restaurants, and other trade and services.

Along with trade and services, government also plays a major roll in Gila County's economy. Government was up by 125 positions over-the-year, as of September 1991. Government accounts for 23.7 percent of the jobs in Gila County. Growth in the government sector should create new demand for clerks, secretaries, and maintenance workers.

The outlook for Gila County is positive. It will continue to grow, especially in the trade and services sectors. New development at the Roosevelt Dam and a burgeoning population in the Phoenix metropolitan area will assure growing demand for Gila County amenities. The downside risk to Gila County, is a drop-off of in tourist related activities due to recessionary effects that continue to plague the state and the nation.

PINAL COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA

Pinal County has a fortunate location -- between Arizona's two major metropolitan areas of Phoenix and Tucson. In addition, two interstate freeways come together near Casa Grande, giving it a strategic location for transportation. Nonfarm wage and salary employment growth in Pinal County from September 1990 to September 1991 was right at the state average for the same period, coming in at 1.4 percent (425 jobs). The lackluster showing was primarily the result of employment losses in construction, transportation, communications, and public utilities (TCPU), and trade, down a combined 475 jobs.

Government is the largest employer in Pinal County, accounting for more than one-forth of all nonfarm payroll jobs. The largest government employer is the maximum security state prison in Florence. Turnover opens frequent opportunities for corrections officers, guards, and clerks. Other government workers are employed by Central Arizona College, local school districts, the county, and the cities of Apache Junction, Casa Grande, Coolidge, Florence, and Eloy.

Pinal County is one of Arizona's five major agricultural counties. Cotton, grain , and alfalfa are principal crops. A supplement to the area water supply from the Central Arizona Project will ensure continuing production of agricultural products.

Mining also remains an important industry in Pinal County with employment averaging 4,025 so far in 1991. The 1991 average (January to September) is 225 higher than the 1990 average, but employment remains well below the 7,975 peak in June 1980.

Manufacturing, too, continues to be a source of new jobs in Pinal County, especially in the Casa Grande area. Manufacturing is up by 75 jobs, September 1990 to September 1991. Because of the county's strategic location and an aggressive and capable economic development organization, continuing growth in the manufacturing sector is expected.

The trade and service industries, which accounted for 34.2 percent of wage and salary jobs in Pinal County, were headed in opposite directions in September. Trade employment was down by 175 jobs over-the-year, while service employment was up by 375. Although these industries can be expected to grow along with basic industries, such as mining and manufacturing, Pinal County gets should get an additional boost from tourism and winter residents.

DES, Research Administration, forecasts Pinal County SDA's unemployment rates to average 7.1 percent in JTPA PY 1991-92 and 7.7 percent in PY 1992-93. These rates represents about 2,600 and 2,800 unemployed respectively.

The proximity of Arizona's major metropolitan areas to Pinal County will continue to aid in development and also help provide a wide variety of occupational opportunities for the county's diverse economy.

GRAHAM COUNTY SERVICE DELIVERY AREA

The economy of Graham County is one based upon agriculture, government, trade, and services. Total nonfarm payroll employment in Graham County was up 3.7 percent as of September 1991. This translates into an additional 200 jobs more than in September 1990. The Research Administration forecasts Graham County unemployment rates to be 5.9 percent in JTPA PY 1991-92 and 6.4 percent in PY 1992-93.

Employment in government in Graham County will continue to be a principal source of job opportunities. There are over 2,300 employed in government, or approximately two out of every five nonfarm wage and salary jobs in Graham County are in government. Government employment includes jobs at the federal and state prisons, Eastern Arizona College, the municipal governments of Safford and Thatcher, Graham County and the local school districts. Government should continue to be the source of most of the growth in wage and salary jobs in Graham County.

Although there are no mines in Graham County, the circumstances of the mining industry in neighboring Greenlee County have been very important to Graham County. Many miners live in Graham County and commute daily to Clifton and Morenci. An improved outlook in the copper mining industry offers hope for new opportunities in trade and services, especially in the Safford area which is the trade center for both counties.

Manufacturing, finance, insurance, and real estate (FIRE), services, and government are all showing employment gains, over-the-year, in September. All of the other industries experience zero net new jobs. Health and social services offers the greatest potential for growth, with job opportunities for registered nurses, nurses aides, orderlies, and medical and dental assistants. Other potential job opportunities include food preparation and service workers, waiters and waitresses, janitors, maids, and first line supervisors.

The outlook for Graham County's economy is for stabilization. Improvement in the copper mining industry should generate some growth in the services and trade industries. Agriculture, trade, services, and government should be the major sources employment growth in Graham County.

GREENLEE COUNTY SERVICE DELIVERY AREA

Wage and salary employment in Greenlee County showed an outstanding 12 percent over-the-year increase in September 1991. This is by far the highest growth rate in the state, but wage and salary employment in Greenlee County accounts for only 1.8 percent of the state total, and only 375 new jobs were created. The Research Administration forecasts Greenlee County's unemployment rates to be 6.7 percent in JTPA PY 1991-92 and 7.2 percent in JTPA PY 1992-93, representing about 250 unemployed.

Despite improvement in the mining industry, Greenlee County's economy has a long way to go to recover the jobs it has lost since the mining slump of 1982. Mining employment peaked at 2750 jobs in July of 1981, and the average so far in 1991 is slightly over 1900. The present price of copper notwithstanding, future job opportunities will be limited mostly to turnover of existing equipment operator and general laborer positions.

Government accounts for around twenty percent of the present employment base in Greenlee County. Actually, there are as many government jobs in Greenlee County today as there were when mining employment was at its peak (about 550) .

Trade and services have always been disproportionately small in Greenlee County. That's because Safford in neighboring Graham County is the trading center for both counties and the larger retail and services base in Safford continues to draw Greenlee County residents there.

Greenlee County's growth prospects, although marginally improved with the improvement in the copper mining industry, continue to depend on the need for economic diversification. Employment opportunities will exist for laborers, material movers and handlers, truck drivers, mechanics and repairer helpers, maintenance repairers, janitors, and waiters and waitresses.

LA PAZ COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA

The economy in La Paz County is dominated by trade, services, and government industries. Employment in the trade sector alone accounts for a third of the wage and salary jobs in La Paz County. Wage and Salary employment experienced a 3.2 percent over-the-year rate of growth in September 1991, adding 125 new positions. Gains were posted by construction, transportation, communication, and public utilities (TCPU), services, and government. Surprisingly, trade, which holds the lions share of wage and salary positions in La Paz County, was down by 25 in September.

La Paz County as a whole is beat out only by Greenlee County for the position as Arizona's smallest. However, nonreservation La Paz County (La Paz SDA) assumes first rank over Greenlee County for "smallest" honors with an expected labor force of only 2,286 in JTPA PY 1991-92. Unemployment rates of 9.0 percent in PY 1991-92 and 9.8 percent in PY 1992-93 are forecast, which represents unemployment of about 220. Nearly one out of five of the SDA's residents are in poverty, however.

Economic activity in the county is centered in Parker and in support of water-based recreation along the Colorado River north of Parker to the Parker Dam. Additional trade and services are provided at locations near freeway interchanges of Interstate 10, the principal transportation corridor from Phoenix to Los Angeles, especially at Quartzsite and Ehrenberg. In the wintertime, Quartzsite bustles with hundreds of additional temporary residents camped in recreational vehicles.

The outlook for La Paz County is for stability, or very slow growth. Employment opportunities will occur for waiters and waitresses, cashiers, retail salespersons, food preparation and service workers, and janitors and cleaners. Most opportunities will be from turnover rather than growth, and many jobs will be seasonal. Opportunities for water-based recreation on the Colorado River will continue to draw increasing numbers of visitors from the population centers of southern California and from Phoenix.

MOHAVE COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA

Mohave County nonfarm wage and salary jobs increased 2.7 percent between September 1990 and September 1991 adding 750 jobs. This represents an decreased rate of growth from previous Septembers (9.4% in 1990, 10.5% in 1989) Residence-based total employment, on the other hand, shrank by 1.8 percent decreasing the total employed by 675.

Total employment in Mohave County is strongly influenced by job growth across the Colorado River in Laughlin, Nevada. Most of those who work in Laughlin live in Bullhead City in Mohave County, because there is little residential land in Laughlin. New Laughlin casinos completed and staffed over the last several years accounted for much of the Mohave County total employment growth in 1989 and 1990. Laughlin, Nevada's success as an entertainment site has also been responsible for making Bullhead City the largest city in Mohave County.

All industries, except mining and construction, experienced over-the-year employment gains, as of September 1991. Manufacturing employment in Mohave County showed a 2% increase, gaining 50 jobs. Services and government together added 725 new jobs. Construction, the only industry to lose employment, was down by 125.

Moderate growth is expected to continue in trade, services, government over the next year or two. Construction employment may also make a come back, if plans to add new and expand existing casinos, that have been put on hold, come back on line. Manufacturing will show little or no growth during the months ahead. Employment opportunities will exist for maintenance repairers, waiters and waitresses bookkeeping clerks, general office clerks, secretaries, automotive mechanics, retail salespersons, cashiers, truck drivers, construction tradesmen, tellers, food preparation workers, and bartenders. New and existing Laughlin casinos will provide opportunities for those with skills in gaming occupations as well as for slot machine mechanics and repairers.

The outlook for Mohave County is moderating. It's unemployment rate is forecast to increase to 6.2 percent in JTPA PY 1991-92 and increase to 6.7 percent in JTPA PY 1992-93. Its rates, although up from prior years, will still be among the lowest of the nonmetropolitan counties. Although Bullhead City is benefiting most from the Laughlin boom, some spillover benefits will accrue to Kingman, and Lake Havasu City.

MARICOPA COUNTY SERVICE DELIVERY AREA

The Maricopa County JTPA Service Delivery Area is composed of that portion of the county outside the City of Phoenix and less the Indian reservations. It includes the major communities of Chandler, Gilbert, Glendale, Mesa, Peoria, Scottsdale, Sun City, and Tempe, as well as many smaller communities and unincorporated areas of the county. These areas include some of the fastest growing communities in the country.

Rates of unemployment in this "Balance of Maricopa County" area are among the lowest in the state. The DES Research Administration forecasts the unemployment rates to be 4.3 percent in JTPA PY 91-92 and 4.4 percent in PY 92-93. Despite being among the lowest rates in the state, they represent more than 20,000 unemployed while much higher rates in smaller counties often represent less than 1,000 unemployed. It is also possible that later forecasts, made after the full effects of the national recession are known, will show higher rates.

The Balance of Maricopa County also has the second lowest poverty rate in Arizona - 9.5 percent. Nevertheless, this represents more than 109,000 people who are economically disadvantaged. Pockets of poverty exist both within the environs of otherwise well-off communities, as in Guadalupe which is surrounded by Tempe and Phoenix, and in more remote locations such as Gila Bend which is well-outside the Phoenix metropolitan area.

Although the Balance of Maricopa County's employee/resident worker ratio of 87.1 implies there is a great deal of commuting by workers into the City of Phoenix, the cities adjoining Phoenix are more than bedroom communities. All have substantial manufacturing as well as trade and services facilities.

But just as Phoenix's economy cannot be analyzed without reference to the whole Phoenix metropolitan area, neither can the Balance of Maricopa County's economy be analyzed without reference to Phoenix. Maricopa County is a single labor market in which workers can change jobs without changing residences. Of course this implies a certain level of mobility, and one's willingness and ability to commute rises and falls with the level of pay offered.

Maricopa County's economy as measured by job growth was the fastest growing in the nation during 1983, 1984, and 1985. It dropped to 49th in early 1988, but bounced back among the top 20 metropolitan areas in late 1989. From September 1990 to September 1991, Maricopa County added 10,500 jobs and grew at a rate of only 1.1 percent, but compared to the nation's job growth rate of a negative 1.0 percent, this was a very respectable rate of growth.

Most new job opportunities will be found in the trade and services sectors. Construction is still on a slide that began four years ago, and the rate of decline has increased so far in 1991. It is not forecast to end its decline in the next two years. Manufacturing, too, will decline over the next two years, so most opportunities will be from turnover. Transportation has been the area's fastest growing industry in the last two years, but its continuing prosperity is threatened by the national recession which has slowed the rate of growth in the transportation sector.

JTPA service deliverers face the challenge of shrinking the poverty pockets by training eligible clients for jobs sufficiently well-compensated to lift them from poverty. There may be the additional challenge of placing JTPA trainees at a time when many other skilled workers are being laid off and will be competing for the same jobs.

PHOENIX SERVICE DELIVERY AREA

The City of Phoenix is the heart of Arizona's largest labor market having a labor force of more than a million people. The City's portion of that metropolitan labor force is about 600,000. The area economy has suffered some job losses among its goods-producing sector over the last few years, but service sector job growth has made up the difference. The DES Research Administration forecasts the City's unemployment rate to be 4.7 percent in JTPA PY 91-92 and 4.8 percent in PY 92-93 representing 28,600 and 29,800 unemployed respectively.

Phoenix has a large and diverse economy ranking it among the wealthier areas of the state, but it does have pockets of poverty as do most other major cities of its size. The Phoenix poverty rate is 11 percent, meaning there are more than 107,000 economically disadvantaged living in Phoenix.

Workers' willingness to commute substantial distances between home and work makes it unrealistic to analyze Phoenix's economy separate from the whole of Maricopa County. Its employee/resident worker ratio of 111 does substantiate that more workers commute to Phoenix than commute from it, however. It has more in-commuting because it is the seat of state and county government as well as the financial center of the state.

Almost 11,000 jobs were created in the Phoenix metropolitan labor market from September 1990 to September 1991. That represents a growth rate of 1.1 percent, much better than negative 1.0 percent growth rate the nation enjoyed in the same period. Between 1983 and 1986, the Phoenix area job market was the nation's fastest growing. Since 1986, there has been substantial loss of jobs in construction and in related employment in finance, insurance, and real estate (FIRE), because of over-building during the boom. The rate of decline in construction employment slowed dramatically in 1990, but so far in 1991 has deteriorated. From September 1990 to September 1991 construction has lost 4,300 jobs, compared to only 300 in the 1989 to 1990 period. Manufacturing employment has also deteriorated, losing about 5,100 jobs over the September 1990 to September 1991 period, compared to only 2,500 for the 1989 to 1990 period.

Despite these losses there has been a net job gain, because trade, services, and government have continued to grow. As of September 1991, government has added 2,700 jobs over-the-year, while services and trade together added more than 19,000 jobs.

While the outlook for the Phoenix area labor market, as for the state as a whole, is uncertain because of the effects the national recession is having on the economy, Phoenix will probably fair better than other parts of the country. If the national economy continues to improve, there will probably be some job growth in the Phoenix area.

Challenges for JTPA service deliverers lie in training that sector of the economically disadvantaged population that can be lifted out of poverty by qualifying them for better-paying jobs. No labor market in the state offers a greater variety of opportunities.

NAVAJO COUNTY SERVICE DELIVERY AREA

The Navajo County SDA is composed of the nonreservation portion of Navajo County. It excludes the Navajo and Hopi Reservation lands on the north and the Apache Reservation lands on the south. The remaining land available for private economic activities constitutes about one third of all of Navajo County. It's chief economic assets are: 1) Interstate 40, the principal and most direct route between Chicago and Los Angeles. Interstate 40 follows approximately the path of the historical and storied federal route 66, although remnants of the old route remain. 2) The White Mountains and all their recreation resources for summer and winter, as well as logging resources. 3) The Cholla Power Plant, a coal-fired plant providing power to urban areas of central and southern Arizona.

Navajo County's nonfarm wage and salary employment shrank by 0.9 percent from September 1990 to September 1991, losing 200 jobs. Manufacturing, mining, and construction were the only industries to show gains, adding a combined 200 jobs. Government was the big loser in Navajo County, down 225 positions. Transportation, Communication, and Public Utilities (TCPU), which is dominated by the Cholla power plant, lost 25 jobs, as did finance, insurance, and real estate (FIRE), and trade.

Better than one in four jobs in Navajo County is in some way associated with government. Government entities range from local government special districts to units of the U.S. Department of Agriculture, Forest Service. Much of Services employment is also government related, because Indian tribal governments are classified among services.

Professional, paraprofessional, and technical jobs in Navajo County government have high concentrations among Foresters and Conservation Scientists, Teachers and Instructors of Vocational Education and Training, Teacher Aides, Registered Nurses and Licensed Practical Nurses. Among Clerical and Administrative Support occupations greater concentrations of jobs are in Secretaries, Typists, General Office Clerks, and Dispatchers for police, fire and ambulance services. Service jobs have concentrations among Police, Firefighters (including seasonal forest firefighters), Cooks, and Janitors and Cleaners. Production jobs are concentrated among Maintenance Repairers, Highway Maintenance Workers, and Motor Vehicle Operators.

Much of the growth in services was to serve tourism along Interstate 40 in Holbrook and Winslow, and in the White Mountains in the population centers of Showlow, Pinetop and Lakeside. With improvements to the Sunrise skiing area now in place, winter tourism should be enhanced, drawing more business to nearby Pinetop and Lakeside as well. As the urban populations of Arizona grow, the mountain areas of Navajo County will continue to attract increasing summer tourism and second home buyers.

Nonreservation Navajo County's unemployment rate is forecast to average 8.1 percent in JTPA PY 91-92 and 8.8 percent in PY 92-93. The poverty rate is 12.5 percent of the population which just about matches the state 12.7 percent average.

Navajo County's economy has experienced some diversification over the past few years adding a new corrections facility, expansion at the Sunrise Ski Resort, a hat manufacturer, new and expanded hotels and motels, and improved roads and highways. Continuing diversification will enhance Navajo County's economic outlook.

PIMA COUNTY SERVICE DELIVERY AREA

The Pima County JTPA Service Delivery Area includes the City of Tucson, Arizona's second largest city, but does not include surrounding Indian reservations. Pima County as a whole represents Arizona's number two labor market having a labor force of almost 320,000 in 1990. The DES Research Administration forecasts Pima County SDA's unemployment rates to average 3.6 percent in JTPA PY 91-92 and 3.7 percent in PY 92-93, representing about 11,500 and 12,500 unemployed, respectively.

From September 1990 until September 1991, Pima County's labor force grew by 3.3 percent, more than double the state average of 1.5 percent for the same period. Nevertheless, both total employment and total unemployment were down from September 1990 levels. Job growth so far in 1991 has been outstanding when compared to the state and the nation. All of the industries in Pima County experienced employment gains except manufacturing, which was down by 1000 jobs over-the-year in September. Services had the largest increase, adding 4,300 jobs. Government experienced the second largest increase, gaining 2,100 positions. Services and government employment account for just over 50 percent of all nonfarm payroll jobs in Pima County.

Although job losses continue in manufacturing, the construction industry in Pima County has returned to a positive growth rate. Construction in September was up by 2.6 percent from September 1990, adding 400 new jobs.

Pima County's near-term outlook is for continued growth in all areas except manufacturing and FIRE. Manufacturing should continue to experience employment losses, but at a much slower pace. Troubles in the banking and insurance sectors should put a halt to growth within FIRE, which will have trouble just maintaining current employment levels. The effects of the national recession appears to have been less severe in Pima County, which so far in 1991, is experiencing faster growth in payroll employment than the state as a whole.

Pima County's JTPA programs have been fortunate in one respect. Job losses in 1990 did not translate to higher unemployment. Rather, most workers either left town or just dropped out of the labor force.

From Pima County's size alone, there will be some job opportunities for completers of JTPA programs. Most jobs will be from turnover and separations from the labor force rather than growth, but there is great diversity in the Pima County economy. Pima County's poverty rate (12.2%) is about at the state average (12.7) representing more than 145,000 economically disadvantaged, so the challenge for JTPA service deliverers is to reduce that rate.

SANTA CRUZ COUNTY SERVICE DELIVERY AREA

From September 1990 to September 1991, the wage and salary employment growth rate in Santa Cruz County was over three percent. Nevertheless, Santa Cruz County's unemployment rate will remain one of the highest in Arizona. The DES Research Administration forecasts Santa Cruz County's unemployment rate to be 13.0 percent in JTPA PY 1991-92 and 15.0 percent in JTPA PY 1992-93.

Trade, services, and government account for over three quarters of the wage and salary jobs in Santa Cruz County (about 8,200 out of 10,600 jobs.) The location of this county on the U.S.-Mexico border and its site as an international transportation thoroughfare produces over 5,000 jobs in wholesale and retail trade. The ability of Santa Cruz County to create new jobs in trade and services is directly related to the Mexican as well as the U.S. economy. Because Mexico's economy has been restructured and is recovering since it suffered a set-back from oil price depreciation, there have been growing economic opportunities in Nogoles and the balance of Santa Cruz County.

Also because of this link to the Mexican economy, the health of the Mexican peso strongly influences the demand for goods on the Arizona side of the border. Because there have been no major inflation surges in the Mexican economy during the recent past, demand for Arizona goods has been fairly stable, and trade employment has grown. Nevertheless, another inflation surge in Mexico of the kind that occurred in the early 80's could once again send border trade employment into a decline, close many stores, and deflate rents. It would take a major economic shock, or political instability in Mexico, to cause another surge in Mexican inflation, however.

Santa Cruz County's border location also presents unique opportunities for manufacturing. Indeed, electronics machinery manufacturing has shown long-term growth, much of it associated with maquiladora plants (twin plants) in which American components are assembled on the Mexican side of the border, and returned to the American side for further processing. Growth occupations associated with the electronics machinery manufacturing industry include production supervisors, inspectors, testers, graders, and sorters, purchasing agents, and production managers.

Over the next two years, the Santa Cruz County economy is expected to grow at moderate rates making some new opportunities, but the majority of job openings will be from turnover.

Santa Cruz County has an 18.1 percent poverty rate, half again the state average. It is also a bilingual county with more than two thirds if its population speaking a language other than English at home. Nearly one out of six of its population does not speak English well.

YAVAPAI COUNTY SERVICE DELIVERY AREA

From September 1990 until September 1991, Yavapai County's economy grew 3.3 percent adding 950 nonfarm wage and salary jobs. This was a significantly higher growth rate than the state average (1.5 percent) during the same period, but down from prior years. Every industry enjoyed growth except transportation, communications, and public utilities (TCPU), which lost 75 positions. Services added 475 jobs growing 6.7 percent over-the-year. Government showed an increase of 250 from September to September, a 4.2 percent increase.

Yavapai County has been one of the most economically successful nonmetropolitan counties, competing on a regular basis with neighboring Mohave County for the lowest nonmetropolitan county unemployment rate. Unemployment rates for nonreservation Yavapai County are projected to be 4.8 percent in JTPA PY 1991-92 and 5.2 percent in JTPA PY 1992-93. The poverty rate in the Yavapai County SDA is 12.6 percent, nearly equal to the state average (12.7 percent).

Tourism is an economic factor of growing importance to the Yavapai County. As of September 1991, 525 jobs were added over-the-year by trade and services to serve tourism as well as the local population. Prescott and Prescott Valley are the trade centers surrounded by the Prescott National Forest and its many recreation sites. The Verde Valley, including the towns of Camp Verde, Cottonwood, and Clarkdale, is experiencing significant growth as well. Prescott and other towns of Yavapai County are also popular retirement centers.

Yavapai County's diversified economy has left it with a long list of industries enjoying long term growth: automotive repair services, business services, general and special trade construction contractors, depository institutions, eating and drinking places, health services, insurance agencies, legal services, lumber and wood products manufacturing, printing and publishing, and wholesale trade.

The outlook for Yavapai County is for continued growth, and continuing economic performance superior to most of the other nonmetropolitan counties.

YUMA COUNTY SERVICE DELIVERY AREA

The economy of Yuma County has experienced modest employment declines over the past year. (Nonfarm wage and salary employment fell by 0.1 percent from September 1990 to September 1991.) Yuma County is forecast to continue having the highest unemployment rates in the state, 18.4 percent during JTPA PY 1991-92 and 19.9 percent in PY 1992-93.

Agriculture, government, trade, and services account for the largest portion of employment in Yuma County. Seasonality is a significant factor in the Yuma County economy. Both agriculture and tourism seasons peak in the winter creating the greatest number of jobs. In the summer, unemployment rises especially among agricultural workers and those employed in trade and services who served winter tourists. Government as a nonseasonal source of jobs offers a stabilizing component to the area economy. Government employment includes jobs at the Marine Corp Air Station, Yuma Proving Grounds (Army), Arizona Western College, and the City and County of Yuma.

The tourism industry in Yuma County will continue to enhance the prospects for employment in trade and services. Urbanization of southern California and Arizona will increase recreational activity along the Colorado River and annual influxes of temporary winter residents will continue to increase the demand for services.

Yuma County manufacturing has suffered from declines over the last year. In fact, apparel manufacturing has been in a long term decline. Still, there are approximately 2,100 currently employed in manufacturing in Yuma County. Most factory job opportunities will result from turnover rather than growth in the near term, however.

The outlook for Yuma County is for very slow growth. Local economic developers should be working to diversify the economy in order to mitigate off-season unemployment. More jobs in manufacturing, transportation, communication, and public utilities (TCPU) and nonseasonal trade and services would help.

TRIBAL SERVICE DELIVERY AREA

The Tribal Service Delivery Area (Tribal SDA) is comprised of 19 reservations located throughout the state. The Arizona Department of Economic Security serves as Grant Recipient for the Tribal SDA. Eight tribal governments and the Indian Development District of Arizona serve as administrative entities, contracting with the State of Arizona to provide JTPA services on the reservations. The Tribal SDA's Title II-A and Title II-B allocations are distributed to its administrative entities based on a population formula using current Bureau of Indian Affairs (BIA) data.

The DES Research Administration forecasts the Tribal SDA's unemployment rates to be 14.5 percent in JTPA PY 1991-92 and 14.7 in PY 1992-93. These rates represent about 3,200 and 3,300 unemployed respectively. Because there are few opportunities for employment on the reservations, there are many who would look for work if they believed it was available, but do not look because they don't expect to find anything. These are the "discouraged unemployed" and are not counted among official Department of Labor unemployed since the definition requires a job search effort. Therefore, official unemployment rates probably understate the problem of unemployment on the reservations.

The poverty rate for the Tribal SDA may be a better measure of the degree of economic hardship that does exist on the reservations. The Tribal SDA's poverty rate is 38.8 percent, three times the state average.

Another important demographic characteristic of the reservations is that there is a higher proportion of youth than there is among the state's population as a whole. In addition, there is a high proportion of reservation residents who speak a language other than English at home (often a native language such as Hopi), and, therefore, there is a substantial proportion who do not speak English well.

Although many engage in traditional arts and crafts (e.g., silver and turquoise jewelry making , pottery making, or basket or textile weaving), crafts sales, except by a few well-known people, are generally seasonal. In addition, craft sales do not represent sufficient economic opportunity to provide more than a subsistence level of earnings for most craftspeople. No significant change is anticipated for this industry in the near future.

The various social, health, education, and job training programs funded by local, state, and federal governments supply more than 90 percent of all available employment on the reservations. Past government budget reductions have resulted in layoffs of employees on most reservations. Simultaneously, the tribal governments have experienced reductions of revenue derived from tribal resources, resulting in additional layoffs.

There are a limited number of employment opportunities on reservations in the private sector, including tribally owned enterprises. Also, there is a tendency toward turnover in these jobs as employees find more attractive career opportunities off the reservations. No significant growth in the reservations' private sector is anticipated in the near future.

NAVAJO NATION SERVICE DELIVERY AREA

The Arizona Navajo Nation Service Delivery Area, located in the northeastern quadrant of the state, covers approximately 15,664 square miles, or roughly more than 10 million acres. It occupies the major portions of Apache and Navajo Counties, and approximately a third of Coconino County.

The Navajo Nation is a direct service provider through governmental subunits representing five major geographical regions referred to as agencies. These agencies are subdivided into districts and chapters. The chapters are the local units of government, and combinations of several chapters comprise districts. The Arizona portion of the Navajo Nation is served by four agencies - Tuba City, Chinle, Fort Defiance, and Shiprock. Boundaries of the Shiprock and Fort Defiance Agencies extend into New Mexico, as does Tuba City into Utah. A total of 58 chapters make up the Navajo Nation JTPA Service Delivery Area in Arizona.

The DES Research Administration forecasts the Navajo Nation unemployment rates to be 14.1 percent in JTPA PY 1991-92 and 14.2 percent in PY 1992-93. These rates represent about 3,100 and 3,200 unemployed respectively. The Navajo Nation poverty rate is the state's highest at 47.8 percent.

The Navajo Nation's current goal is to develop the private sector. Progress has been slow for commercial and industrial development . In reaching for this goal, some the strategies include: 1) developing tribal enterprises to promote small business development, 2) developing Navajo financial institutions, 3) promoting tourism, and 4) developing energy resources. These strategies are intended to build up the private sector, increase opportunities for Navajo entrepreneurs, and create employment opportunities for the Navajo people.

Government, services and mining are the three industrial sectors that cumulatively comprise over 70 percent of employment on the Navajo Reservation. Coal mining will remain stable as the Navajo Tribe is mostly an exporter of Tribal natural resources.

The goal of the Navajo JTPA program is to provide Navajo people with training opportunities and employment experience consistent with labor market demand. In addition to making employment opportunities available through economic development, the Navajo Department of Employment and Training must assure that the Navajo people are prepared to take advantage of those opportunities.

An additional goal of the Navajo Nation Service Delivery Area is to promote maximum use of training and retraining resources to prepare the Reservation work force and strengthen the Navajo Nation's economy.

The Navajo Nation's Department of Employment and Training recognizes the characteristics of the Service Delivery Area, and will emphasize appropriate job training directed at growth occupations and labor market demand.

APPENDIX OF MISCELLANEOUS TABLES

POVERTY INCOME GUIDELINES
EFFECTIVE APRIL 19, 1991

FAMILY SIZE	POVERTY GUIDELINES
1	$ 6,620
2	8,880
3	11,140
4	13,400
5	15,660
6	17,920
7	20,180
8	22,440

For each additional family member add $2,260.

SOURCE: U.S. Department of Health and Human Services
February 1991.

LOWER LIVING STANDARD INCOME LEVEL
(70 PERCENT LLSIL)
EFFECTIVE APRIL 13, 1991

FAMILY SIZE	METROPOLITAN INCOME	NONMETROPOLITAN INCOME
1	$ 5,800	$ 5,750
2	8,500	9,420
3	13,050	12,930
4	16,100	15,960
5	19,000	18,840
6	22,220	22,030
For each additional person add	$ 3,220	$ 3,190

NOTE: These figures are only for the purpose of determining eligibility for JTPA programs and should not be used for any other statistical purposes. Since the Bureau of Labor Statistics has not revised the lower living family budget (on which the LLSIL is based) since 1981, ETA used consumer price index changes to update the LLSIL to meet JTPA requirements.

The adjustment factor is calculated by dividing the ratio of the local economically disadvantaged youth to adults by the national ratio (22.93 percent) and substracting 1 from the result.

((Local ED Youth/Local ED Adults)/.2293) - 1 * 100 = Adjustment Factor

The adjustment factor represents the difference between the youth/adult makeup of the economically disadvantaged population in the local SDA and the national youth/adult composition.

DECLINING INDUSTRIES AND OCCUPATIONS

The attached list of declining nonagricultural and nongovernmental industries was determined by using multiple data sources, including Unemployment Insurance reports and local periodicals. A seven-year span of information, from mid-1981 to mid-1988, was used in order to negate the effects of the business cycle, and to reveal true structural change of the economy. In parentheses after each industry is the corresponding two-digit code from the 1987 Standard Industrial Classification Manual.

The corresponding list of occupations was determined by examining Occupational Employment Statistics (OES) data. For each declining industry, those occupations having greater than a third of their county employment in the declining industry are included. Those occupations with a third or less of their employment in the declining industry can be expected to have other opportunities for employment within the labor market. In addition, occupations were listed if they were within the ten occupations with the highest numbers in that declining industry. Occupational information by industry is not available if an industry is not surveyed by OES, if listing an occupation would violate the confidentiality standards of the OES program, or if an occupation has fewer than five employees within an industry. The occupations are listed, along with their OES codes, in descending order by employment level.

Apparel Manufacturing (23)

Production, Planning, and Expediting Clerks (58008)
Shipping, Traffic, and Receiving Clerks (58028)

GROWING INDUSTRIES AND OCCUPATIONS

The attached list of growing nonagricultural and nongovernmental industries was determined by using multiple data sources, including Unemployment Insurance reports and local periodicals. A seven-year span of information, from mid-1981 to mid-1988, was used in order to negate the effects of the business cycle, and to reveal true structural change of the economy. In parentheses after each industry is the corresponding two-digit code from the 1987 Standard Industrial Classification Manual.

The corresponding list of occupations was determined by examining Occupational Employment Statistics (OES) data. Occupations with the highest employment levels are given for each growing industry and are listed, along with their OES codes, in descending order. Occupational information by industry is not available if an industry is not surveyed by OES, if listing an occupation would violate the confidentiality standards of the OES program, or if an occupation has fewer than five employees within an industry.

Source: Arizona Department of Economic Security,
Research Administration
May 1989.

GROWING INDUSTRIES

APACHE COUNTY
- Automotive Dealers and Gasoline Service Stations (Retail Trade) (55)
- Construction--Special Trades (17)
- Health Services (80)
- Hotels, Rooming Houses, Camps, and Other Lodging Places (Services) (70)
- Miscellaneous Retail Trade (59)
- Real Estate (65)

COCHISE COUNTY
- Automotive Dealers and Gasoline Service Stations (Retail Trade) (55)
- Automotive Repair, Services, and Parking (75)
- Business Services (73)
- Eating and Drinking Places (58)
- Electrical and Electronic Machinery, Equipment, and Supplies (Manufacturing) (36)
- Health Services (80)
- Miscellaneous Services (89)
- Motor Freight Transportation and Warehousing (42)
- Social Services (83)
- Transportation Services (47)
- Wholesale Trade--Durable Goods (50)

COCONINO COUNTY
- Automotive Repair, Services, and Parking (75)
- Business Services (73)
- Eating and Drinking Places (58)
- Food Stores (54)
